

How Can I Make My Profile Private?

Here’s how to switch to a private account in just a few steps:

Want more control over who sees your moments and interacts with your profile? Currently gives you the option to make your profile private — so only people you approve can follow you and view your moments.

How to Make Your Profile Private

- 1. Open the Currently app
- 2. Tap your profile icon (bottom right)
- 3. Tap the gear/settings icon ⚙️ (usually top right)
- 4. Go to Privacy Settings
- 5. Toggle Private Account to ON

Once enabled, your account becomes private immediately.

What Happens When Your Profile is Private?

Action	What It Means
Your moments are hidden	Only approved followers can see your content
New followers need approval	People must send a request to follow you
Moments not shown on Map/Discover	Your posts will not appear publicly
You stay in control	You can approve or reject any new connection

Who Can Still See Your Moments?

- ☐ People you’ve already approved (followers from before you went private)

- No one else can see your profile, moments, check-ins, or past activity

Can I Go Back to Public Later?

Yes! You can switch your profile back to public at any time:

1. Return to Privacy Settings
2. Toggle Private Account to OFF

Your profile and moments will be visible again to everyone, including in Discover and on the Map (if applicable).

Summary

Setting	Result
Private Account: ON	Only approved followers see your content
Private Account: OFF	Everyone can view your profile and moments
Can switch anytime	Yes — you're always in control

Tip

Even if your account is public, you can still block users, delete comments, and control who can message you in your Chat settings.
