

How Do I Control Moment Privacy?

Here's how to control the privacy of every moment you post.

On Currently, you have the power to decide who sees each moment you share — whether you want it to reach the public or just your followers.

Set Privacy While Posting a Moment

When you tap the '+' button to create a new moment:

1. Add your photo/video, activity, caption, location, etc.
2. Scroll to the Privacy setting (usually near the bottom before posting)
3. Choose from the following options:

Privacy Option	Who Can See Your Moment
Public (Default)	Everyone — shows up in Discover, Map, Profile
Followers Only	Only people who follow you
Close Friends (Coming Soon)	A custom list of trusted people

1. Tap Post — your moment will be shared with the selected audience.

When Should I Adjust Privacy?

- ☐ Sharing a personal or casual update? Use Followers Only
- ☐ Want your moment to appear in Discover or on the Map? Use Public
- ☐ Posting from a private place or sensitive moment? Keep it to Followers Only for more control

Your Privacy, Your Rules

You're always in control. No moment is ever forced to be public — and each moment can have its own privacy setting when you post it.

Summary

Action	What to Do
Set privacy while posting	Tap '+' → Scroll to Privacy → Choose Public or Followers Only
Moment-by-moment control	Each moment can have its own privacy setting
Default privacy setting	Public (can be changed manually every time)
